

BAADER 1919

BAADER Quality since 1919

In the course of the years, the company Nordischer Maschinenbau Rud.Baader GmbH & Co. KG founded in 1919 by Rudolph M.J. Baader has developed into a worldwide leading manufacturer of machines and systems for food processing.

To date [Lübeck](#) in Germany is the location of the head office

BAADER Today

Production program:

At present, BAADER's major competences comprise three product ranges:

- The traditional support of the group of companies is the extensive program of [fish processing machines](#) and systems, as well as [engineering](#)
- The versatile belt [separators](#)
- Machines for the [poultry processing](#) industry

Production:

Since its foundation, the BAADER company has been attaching much importance to state of the art production technology in order to ensure the precise manufacture of many thousands of individual parts. A comprehensive quality assurance system guarantees a defined quality.

Research and

Development:

Research and development have a particular rank in the company. Experienced graduated engineers, electronics engineers, technicians and mechanists are working in laboratories, design and research departments to find innovative solutions for the manifold tasks. Only those companies pursuing research and development can offer to their customers innovative solutions at highest level

Spare-Parts and Services:

The large centralized spare parts store in Lübeck, decentralized service centers and agencies in over 70 locations worldwide, efficient serial production and preassembly of the highly precise spare parts as well as the daily shipment of spare parts guarantee the customer a maximum of benefit and productivity of the BAADER machines.
